

Developer Handoff

Project: Arizona Assisted Living Intelligence Hub

From: Patrick

To: Fawad

Fawad,

I want to build a lightweight internal **Intelligence Hub** that helps us establish authority in the Arizona assisted living market before we resume the next major phase of RAL Connect.

This is meant to be a fast, practical build — not a large platform.

The purpose of this hub is to:

- pull in assisted living regulatory and market updates
- use AI to summarize and interpret them
- rewrite them in a clear, practical tone that sounds like me
- generate ready-to-post insights for a Facebook group and future email updates

The end result should be a simple internal content engine that gives us a daily stream of useful market intelligence we can use to build trust, visibility, and momentum in the Arizona assisted living space.

1. Strategic Purpose

What this is

This is a lightweight **internal intelligence and content engine**.

It is not a public platform right now.

It is not a social network.

It is not a full version of RAL Connect.

It is a small internal system that helps us monitor the market, process updates, and convert those updates into practical content.

What it is for

The goal is to create:

- a daily stream of relevant insights
- a centralized knowledge base
- an authority-building content engine for Arizona assisted living

This allows us to:

- build trust with owners and managers

- grow a targeted audience quickly
- create consistent conversations in the market
- identify real operational problems in real time
- warm up the market before we launch the next software phase

2. Why This Matters

Instead of building more software first and then trying to find users later, I want to reverse the order.

Old way

Build software → then try to find users

Better way

Build attention and trust → then launch software into an engaged audience

This improves:

- speed to first revenue
- conversion rates
- product-market fit
- long-term adoption of RAL Connect

This hub helps us understand what the market is actually dealing with before we invest more time into new software features.

3. Why This Makes Us More Money

This is not a detour. It is a short strategic move that helps create revenue faster and reduces risk.

This hub becomes a lead engine for:

1. the manager compliance system, which is the next phase of RAL Connect
2. relationships with owners and operators
3. future placement and deal opportunities

It also has future standalone monetization potential:

- premium insights
- sponsored visibility
- industry partnerships

Most importantly, when we reintroduce RAL Connect, we are not launching into a cold market. We are launching into a market that already knows us, sees us as useful, and trusts our insight.

4. Main Outcome We Want

I want a system that does the following:

1. pulls in assisted living regulatory and market updates from selected sources
2. stores those updates in a simple database
3. uses AI to process each item
4. outputs clean, practical summaries in my tone
5. creates ready-to-post Facebook group content
6. organizes everything in a simple internal admin area for review and editing

The key outcome is that every day we can open the hub and see usable, relevant content and insight without having to manually research everything ourselves.

5. MVP Scope

This is intentionally lightweight.

We are **not** building a full platform.

We are building a simple internal engine.

MVP must do these 5 things:

1. Ingest content

Pull content from:

- RSS feeds
- selected trusted sources
- manually added URLs if needed

2. Store content

Save imported items in a database with the right fields so we can search, sort, review, and reuse them later.

3. Use AI to process each item

For each new content item, AI should:

- summarize the update
- explain what it means in plain English
- rewrite it in a practical operator-focused tone
- generate a ready-to-use Facebook post draft

4. Output structured content blocks

For each article/update, the system should produce:

- headline

- short summary
- “what this means”
- Facebook post draft

5. Display everything in a simple admin panel

We need a basic internal admin view where we can:

- review imported items
- edit outputs
- approve or reject items
- mark priority items
- search/filter records

6. What We Are NOT Building

To keep this fast and focused, do **not** build the following in this phase:

- no public-facing user portal
- no external user accounts
- no member logins
- no Facebook posting automation
- no email automation yet
- no large dashboard system
- no CRM
- no complex permissions structure
- no facility profiles
- no compliance training platform yet
- no RAL Connect matching features

This is an internal tool only.

Manual posting to Facebook is totally fine for now.

7. How It Will Be Used Day to Day

My intended workflow is simple:

Daily workflow

1. system pulls in fresh updates from approved sources
2. AI processes them automatically
3. I log into the admin panel
4. I review the outputs
5. I edit if needed
6. I copy the Facebook-ready version and post it manually
7. later, I can also reuse the same content for email updates or a knowledge archive

The system should save time, improve consistency, and help us sound sharp and relevant every day.

8. Content Types We Care About

The content sources and outputs should focus on things relevant to Arizona assisted living owners, managers, operators, and the surrounding ecosystem.

Priority content themes

- Arizona assisted living regulations
- licensing changes
- compliance issues
- state policy updates
- Medicaid / ALTCS developments
- staffing and caregiver shortages
- facility operations
- resident care trends
- memory care updates
- risk, liability, and best practices
- broader market changes that matter to operators

This should be focused and useful, not general noise.

9. Output Format for Each Item

Each imported article or update should produce the following internal fields:

Raw/imported fields

- source name
- source URL
- original article URL
- original title
- original publish date
- import date
- raw excerpt or content
- category
- tags
- status

AI-generated fields

- rewritten headline
- short summary
- what this means

- operator-focused interpretation
- Facebook post draft
- optional email blurb
- tone score / confidence if helpful

Admin fields

- reviewed yes/no
- approved yes/no
- priority level
- featured yes/no
- notes
- edited by
- edited date

10. AI Processing Requirements

The AI layer is one of the most important parts of this system.

For each content item, I want AI to do the following:

A. Summarize the update

Create a clear summary of the article in plain English.

This should be short, useful, and easy to understand.

B. Explain why it matters

Translate the update into practical relevance.

For example:

- what does this mean for owners?
- what does this mean for managers?
- does this affect staffing, compliance, operations, costs, admissions, or risk?

C. Rewrite in my tone

The final output should feel:

- practical
- clear
- operator-aware
- not robotic
- not overly formal
- not fluffy
- not sensationalized

It should sound like insight from someone who understands the market and is speaking directly to owners and managers.

D. Generate a Facebook-ready post

This should be ready for manual posting inside a Facebook group.

A good Facebook output should include:

- a strong opening line
- a short explanation
- why it matters
- optional conversation prompt or question

Example structure:

- headline or hook
- short explanation
- practical takeaway
- engagement question

11. Tone and Voice Guidance

The AI outputs should reflect my voice as much as possible.

Tone should be:

- practical
- direct
- informed
- helpful
- market-aware
- clear
- conversational but credible

Avoid:

- sounding corporate
- sounding academic
- sounding overly “AI generated”
- excessive hype
- too much jargon
- long-winded wording

This should feel like something I would naturally post to a group of owners and managers.

12. Admin Panel Requirements

We only need a very simple internal admin interface.

Required features

- list view of all imported items
- filter by date
- filter by source
- filter by category
- filter by status
- open individual record
- view raw content
- view AI-generated outputs
- edit AI-generated fields
- approve/reject
- mark priority
- copy Facebook draft easily

Nice to have

- search bar
- duplicate detection
- pin important items
- “ready to post” filter
- simple notes section

This does not need to be fancy. It just needs to be functional and clean.

13. Content Processing Workflow

Please set the system up with a basic flow like this:

Step 1: ingestion

Pull content from approved sources on a schedule.

Step 2: deduplication

Do not create duplicate records if the same article/feed item comes in more than once.

Step 3: categorization

Assign a category automatically if possible using simple source or keyword rules.

Step 4: AI processing

Run the content through OpenAI to generate:

- summary
- what this means
- operator interpretation
- Facebook draft

Step 5: admin review

Show the outputs in admin for editing and approval.

Step 6: manual use

I manually copy/paste the approved content into the Facebook group and later into email updates.

14. Suggested Categories

Please build the system with a category structure that can be edited later, but start with these:

- Arizona Regulations
- Compliance & Licensing
- Assisted Living Operations
- ALTCS / Medicaid
- Staffing & Caregivers
- Residential Assisted Living
- Memory Care
- Senior Care Industry News
- Risk / Legal / Liability
- Manager Insights
- Market Trends

These categories will help us later with filtering, sorting, and identifying recurring themes.

15. Source Management

We need a simple way to manage sources.

Admin should be able to:

- add a source
- edit a source
- disable a source
- mark a source as active/inactive
- define source type if needed

Initial source types

- RSS feed
- direct feed URL
- manual URL entry
- optional scraped page later if needed

Do not overbuild source management right now. Just make it manageable.

16. Technology Preference

Keep the tech approach simple and fast.

Preferred setup

- lightweight backend
- basic database or Airtable
- OpenAI API for processing
- simple admin interface

You can use the same environment as the current project or a separate small app, whichever is faster and cleaner.

Important rule

This should **not interfere with the existing RAL Connect system**.

It should either:

- live separately, or
- be isolated enough that it does not slow down or complicate the current build

17. Recommended Technical Approach

Use the fastest reliable option.

Acceptable options

Option A

Simple custom internal app with:

- backend
- database
- admin UI
- OpenAI integration

Option B

Airtable-based backend + lightweight interface if that is faster

Option C

Existing stack reuse only if it saves time and does not create technical mess

The best choice is the one that gets us to a working internal MVP quickly.

18. Data Structure

At minimum, each content record should have:

Content record fields

- id
- source_name
- source_type
- source_url
- article_url
- original_title
- original_excerpt
- original_content
- original_publish_date
- imported_at
- category
- tags
- status
- ai_headline
- ai_summary
- ai_what_this_means
- ai_operator_takeaway
- ai_facebook_post
- ai_email_blurb
- priority
- reviewed
- approved
- notes
- updated_at

19. AI Prompting Logic

Please structure the AI processing so each item is processed consistently.

The prompts should aim to produce:

Output 1: short summary

2–4 sentences max

Output 2: what this means

Clear explanation of why the update matters to assisted living owners/managers in Arizona

Output 3: operator-focused takeaway

Practical interpretation from an owner/operator point of view

Output 4: Facebook draft

A short, engaging post draft that sounds natural and useful

The system should be able to re-run AI on an item if we want to regenerate better output.

20. Admin Editing Controls

For each record, I want to be able to:

- edit headline
- edit summary
- edit what-this-means
- edit Facebook draft
- change category
- add tags
- mark ready
- mark priority
- approve/reject
- add internal notes

A “copy to clipboard” button for the Facebook draft would be helpful if easy.

21. Search and Filtering

The admin panel should allow filtering by:

- date imported
- category
- source
- approved/unapproved
- reviewed/unreviewed
- priority
- ready to post

This is important because over time we will accumulate a useful library of insights.

22. Knowledge Base Function

Even though this starts as an internal content engine, it should also become a searchable knowledge base over time.

That means we should retain records and make them easy to look up later by:

- keyword
- topic
- category
- date
- source

This becomes valuable later when building compliance software and manager education content.

23. Future Expansion Compatibility

Please build this in a way that leaves room for the following later:

- future public-facing insight portal
- email digest generation
- Facebook posting assistance or automation
- manager compliance training content
- integration into RAL Connect
- issue tracking by theme
- Arizona market intelligence archive

This does not mean we build those now.

It just means do not corner the system into something that cannot expand.

24. Success Criteria for MVP

I will consider this MVP successful if:

1. it pulls in relevant content automatically
2. it stores it cleanly
3. AI generates useful summaries and practical interpretations
4. the outputs sound clear and usable
5. I can quickly review and edit items
6. I can easily grab a Facebook-ready post draft
7. the system saves me time and gives me a daily stream of relevant insight

25. Timeline

This should be a quick build.

Target

- approximately 30–60 total hours
- roughly 1 week to MVP

That is the spirit of this build.

If we go much beyond that, we are probably overbuilding.

26. What Happens After This Is Done

Once this is complete, we go right back to:

- pivoting RAL Connect into the manager compliance system
- using the audience and insight from this hub to guide that build
- using this hub as a trust and lead engine for that next phase

This is meant to strengthen the next project, not delay it.

27. Final Positioning

This is a strategic move, not a distraction.

It gives us:

- faster path to traction
- earlier revenue opportunities
- real market intelligence
- better product decisions
- stronger positioning in Arizona
- a warmer audience before the next launch

Instead of guessing what the market needs, we will see what people are dealing with in real time and build from that position of knowledge.

28. Bottom Line

I want this built as a lightweight internal intelligence hub that helps us monitor the Arizona assisted living market, turn raw updates into useful insight, and create authority-building content quickly.

The system should be simple, fast, clean, and easy to use.

This is the fastest way to create traction now while making the next phase of RAL Connect more successful.

SOURCE MAP: Arizona Assisted Living Intelligence Hub

How to Use This

- Tier 1 = MUST HAVE (core engine)
- Tier 2 = HIGH VALUE (adds depth)
- Tier 3 = OPTIONAL / EXPANSION

TIER 1 — CORE (BUILD THESE FIRST)

1. Arizona Department of Health Services (ADHS)

MOST IMPORTANT SOURCE

What it provides:

- Assisted living regulations
- Licensing updates
- Policy changes
- State-level compliance info

URLs:

- Main: <https://www.azdhs.gov/>
- Assisted Living Page: <https://www.azdhs.gov/licensing/residential-facilities/index.php>
- Newsroom: <https://www.azdhs.gov/news/index.php>

RSS:

? <https://www.azdhs.gov/rss.xml> (if unavailable, scrape newsroom page)

Priority:

★ CRITICAL — drives compliance authority

2. Arizona State Legislature

LAW CHANGES (VERY IMPORTANT)

What it provides:

- New bills
- Law changes affecting assisted living
- Regulatory updates

URLs:

- Bills: <https://www.azleg.gov/Bills/>
- Session updates: <https://www.azleg.gov/legtext/>
- General: <https://www.azleg.gov/>

RSS (use bill tracking or scrape):

No clean RSS — developer should:

- track keywords:
 - “assisted living”
 - “long-term care”
 - “health services”
 - “elder care”

Priority:

★ CRITICAL — legal authority positioning

3. Centers for Medicare & Medicaid Services (CMS)

? FEDERAL IMPACT (ALTCS / Medicaid relevance)

What it provides:

- Medicaid updates
- reimbursement changes
- federal policy shifts

RSS:

? <https://www.cms.gov/newsroom/rss-feeds>

Main:

<https://www.cms.gov/newsroom>

Priority:

★ HIGH — especially for ALTCS angle

4. AHCA/NCAL

INDUSTRY + POLICY

What it provides:

- assisted living trends
- regulatory insights
- operator-focused news

RSS:

<https://www.ahcancal.org/rss.xml> (*if fails, scrape news page*)

News:

<https://www.ahcancal.org/News-and-Communications>

Priority:

★ HIGH — operator-focused content

5. McKnight's Senior Living

? ONE OF THE BEST INDUSTRY SOURCES

What it provides:

- daily senior living news
- staffing issues
- operations trends
- regulatory changes

RSS:

? <https://www.mcknightsseniorliving.com/feed/>

Priority:

★ CRITICAL — daily usable content

6. Senior Housing News

INVESTMENT + OPERATIONS + TRENDS

RSS:

<https://seniorhousingnews.com/feed/>

Priority:

★ HIGH — great for insights + positioning

7. LeadingAge

POLICY + NONPROFIT + AGING SERVICES

RSS:

<https://leadingage.org/rss.xml> (*or scrape blog/news*)

News:

<https://leadingage.org/news/>

Priority:

★ HIGH — adds credibility + policy angle

TIER 2 — HIGH VALUE (ADD AFTER CORE)

8. Arizona Health Care Cost Containment System (AHCCCS)

ALTCS GOLDMINE

What it provides:

- ALTCS updates
- Medicaid changes in AZ
- funding changes

URLs:

- <https://www.azahcccs.gov/>
- News: <https://www.azahcccs.gov/shared/news/>

RSS:

? Not always available — scrape news page

Priority:

★ VERY HIGH for Arizona-specific positioning

9. Kaiser Family Foundation (KFF)

POLICY + DATA

RSS:

<https://www.kff.org/feed/>

Priority:

★ MEDIUM-HIGH — strong insights

10. National Center for Assisted Living

RSS:

? <https://www.ahcancal.org/rss.xml> (*same as AHCA*)

Priority:

★ MEDIUM — overlaps but still useful

11. CDC

HEALTH ALERTS

RSS:

<https://tools.cdc.gov/api/v2/resources/media/403372.rss>

Priority:

★ MEDIUM — only relevant alerts

12. Modern Healthcare

RSS:

<https://www.modernhealthcare.com/rss.xml>

Priority:

★ MEDIUM — filter heavily

TIER 3 — LOCAL NEWS (VERY POWERFUL FOR FACEBOOK CONTENT)

13. AZ Central

RSS:

<https://www.azcentral.com/rss/>

Use:

- local senior stories
- facility issues
- community updates

14. Phoenix Business Journal

RSS:

<https://www.bizjournals.com/phoenix/rss.xml>

Use:

- deals
- new developments
- facility openings

15. 12 News Arizona

RSS:

<https://www.12news.com/feeds/syndication/rss/news>

16. ABC15 Arizona

RSS:

<https://www.abc15.com/rss>

BONUS: GOOGLE NEWS (SMART HACK)

Use dynamic RSS like:

<https://news.google.com/rss/search?q=assisted+living+Arizona>

<https://news.google.com/rss/search?q=senior+living+regulations>

<https://news.google.com/rss/search?q=caregiver+shortage+Arizona>

Priority:

★ HIGH — fills gaps automatically

DEVELOPER IMPLEMENTATION NOTES

1. Frequency

- Pull feeds every 1–3 hours

2. Deduplication

- Compare:
 - title
 - URL
 - publish date

3. Filtering

Only keep articles that match keywords like:

- assisted living
- senior living
- long term care
- caregiver
- memory care
- Medicaid / ALTCS
- nursing / facility
- elder care

4. Arizona Boost Rule

Flag or prioritize:

- any Arizona-specific article
- any regulatory/legal update
- any staffing crisis content

PRIORITY SUMMARY

MUST HAVE (start here):

1. ADHS
2. McKnight's
3. Senior Housing News
4. CMS
5. Arizona Legislature

NEXT:

6. AHCCCS
7. LeadingAge
8. Google News feeds

THEN:

9. Local Phoenix news
10. KFF / CDC / Modern Healthcare

STRATEGIC NOTE

This mix gives you:

- **authority (laws + state sources)**
- **daily content (industry media)**
- **local relevance (Phoenix news)**
- **trend awareness (Google + national feeds)**

This is what makes your Facebook group feel “plugged into the market” every single day.

Below are **developer-ready AI prompt templates** that Fawad can plug directly into the system.

AI PROMPT SYSTEM

Arizona Assisted Living Intelligence Hub

Overall Structure

Each article goes through **ONE MASTER PROMPT** (preferred for speed), or optionally split into multiple steps.

Recommended approach:

Use **ONE structured prompt** that outputs everything at once.

MASTER PROMPT TEMPLATE (USE THIS)

System Prompt (set once)

You are an expert in assisted living operations, regulations, and senior care trends, with deep knowledge of Arizona.

Your job is to analyze industry news and translate it into practical, useful insights for assisted living owners and managers.

You write in a clear, direct, no-fluff tone.

Avoid sounding corporate, robotic, or overly formal.

Write like an experienced operator who understands real-world challenges.

Focus on:

- practical impact
- clarity
- relevance
- usefulness

Never exaggerate or use hype.

Keep things grounded, realistic, and helpful.

User Prompt Template (dynamic input)

Analyze the following article and generate structured outputs.

ARTICLE TITLE:

{title}

ARTICLE CONTENT:

{content}

SOURCE:

{source}

DATE:

{date}

Return your response in the following format:

1. HEADLINE:

Rewrite the headline in a way that is clear, practical, and relevant to assisted living owners and managers.

2. SHORT SUMMARY (2-4 sentences max):

Summarize the key points in plain English.

3. WHAT THIS MEANS:

Explain why this matters specifically for assisted living owners, operators, or managers.

Focus on real-world impact (compliance, staffing, costs, risk, admissions, operations, etc.)

4. OPERATOR TAKEAWAY:

Give a practical takeaway or insight from an experienced operator perspective.

5. FACEBOOK POST:

Write a ready-to-post Facebook group post using this structure:

- strong opening hook
- short explanation
- why it matters
- optional question to drive engagement

Keep it natural, conversational, and useful. Do not use hashtags.

6. EMAIL BLURB (optional but short):

Write a short paragraph that could be used in an email update.

Tone requirements:

- clear
- practical
- direct
- conversational but credible
- not robotic
- not overly long

OUTPUT FORMAT (IMPORTANT FOR DEV)

Return as structured JSON:

```
{
  "headline": "",
  "summary": "",
  "what_this_means": "",
  "operator_takeaway": "",
  "facebook_post": "",
  "email_blurb": ""
}
```

ENHANCED PROMPT (FOR HIGHER QUALITY OUTPUTS)

Use this version if you want stronger authority tone:

Before writing your response, think about:

- What would an experienced assisted living owner immediately care about?
- What part of this creates risk, opportunity, or change?
- What would actually affect day-to-day operations?

Then write your outputs with that perspective.

Avoid generic summaries. Focus on insight.

(Add this right before “Return your response...”)

OPTIONAL: ARIZONA PRIORITY BOOST

If article mentions Arizona, add this logic:

If this article relates to Arizona, emphasize that context and make it clear this

directly impacts local operators.

OPTIONAL: CONTENT SCORING PROMPT

This helps you filter junk content.

Add this output:

7. RELEVANCE SCORE (1-10):

Score how relevant this is to assisted living owners/managers.

FACEBOOK POST STYLES (ROTATION SYSTEM)

To avoid repetitive posts, rotate styles.

Style A: “Heads Up”

Heads up for Arizona assisted living owners...

[summary]

This matters because:

[impact]

Curious – are you seeing this already?

Style B: “Quick Insight”

Quick insight for RAL owners and managers:

[summary]

What this really means:

[impact]

Something to keep an eye on.

Style C: “Question Driven”

Question for assisted living owners:

[issue from article]

We’re seeing:

[summary]

This could impact:

[impact]

How are you handling this right now?

Style D: “Alert Style”

New update that could affect assisted living operators:

[summary]

Here’s the real impact:

[impact]

Worth paying attention to.

Dev can randomly rotate styles or you can manually tweak.

“VOICE TRAINING” ADD-ON (VERY POWERFUL)

Later, we can improve outputs by adding:

Write this in a tone similar to someone who:

- understands assisted living operations
- speaks directly to owners
- avoids fluff
- focuses on real-world impact

GUARDRAILS (IMPORTANT)

Add to system prompt:

Do not:

- make up facts
- exaggerate claims
- sound like a news anchor
- use corporate jargon
- be overly verbose

If the article is not relevant, say so clearly.

FALLBACK PROMPT (LOW QUALITY CONTENT)

If article is weak, use:

If this article has low relevance, still produce outputs but keep them short and clearly indicate limited impact.

REGENERATION PROMPT (FOR EDITING)

If you want to re-run better output:

Rewrite the previous output to be:

- more direct
- more practical
- less generic
- more specific to assisted living operators

ADVANCED (PHASE 2 – OPTIONAL)

Later we can add:

Trend Detection Prompt

Is this part of a larger trend? If so, explain briefly.

Risk Detection Prompt

Does this create compliance or liability risk? Explain.

Opportunity Detection Prompt

Is there an opportunity here for operators? Explain.
